

Dry needling of beter nog Triggerpoint dry needling wordt sinds enkele jaren ook door fysiotherapeuten in Nederland toegepast. Myofasciale Pijn Seminars Groningen verzorgt een uitgebreide scholing op het gebied van myofasciale pijn, myofasciale triggerpoints en triggerpoint dry needling voor reeds gediplomeerde Fysiotherapeuten, Cesartherapeuten en Mensendiecktherapeuten. De scholing wordt verzorgd in samenwerking dr. Jan Dommerholt van Myopain Seminars, Bethesda, MD, USA.

U kunt u inschrijven door rechts bovenin op de data te klikken of via [cursusoverzicht]. Direct na aanmelding ontvangt u een email ter bevestiging.

Deze 15 dagen durende cursus is de meest uitgebreide cursus op dit gebied in Nederland en wordt aanbevolen door Prof. dr. David G. Simons.

Promoting better understanding and treatment of myofascial trigger points (MTrPs) and neuro-musculo-skeletal dysfunctions

is my goal in life. The lack of sufficient understanding and skilful treatment of MTrPs causes so many people unnecessary pain and motor dysfunction that it is a tragedy of modern medicine. When the MTrPs are identified and treated effectively early, it can completely eliminate the development of a disastrous chronic pain condition that is incomparably more difficult to treat. I welcome this opportunity to enthusiastically endorse the Myofasciale Pijn Seminars Groningen. I am deeply impressed and delighted with the leadership, competence, and determination that Carel Bron and Jo Franssen - in close cooperation with Jan Dommerholt [Myopain Seminars, Bethesda, USA] have demonstrated.

They have established THE most authoritative and comprehensive seminars in the Netherlands according to international high standards."

David G. Simons, MD, DSc (Hon.), Clinical professor (Vol,) in Rehabilitation Medicine, Emory University since 2003; Adjunct Professor, Division of Physical Therapy, Georgia State University, 2006. Co-author of both volumes of Travell & Simons, Myofascial Pain and dysfunction: The Trigger Point Manual; and of Mense & Simons' Muscle Pain, he is internationally recognized for his authoritative research on myofascial trigger points.

Op 5 april 2010 ontvingen wij het droevige bericht dat Prof.dr. David G. Simons is overleden. Wij verliezen in hem een groot inspirator.
